A lawn or patio umbrella with an integral lighting system that utilizes cold cathode
ray tubes, light emitting diodes (LED's), or florescent lights, to provide relatively bright
outdoor light for reading and other activities that require relatively high light intensities is
provided. In one embodiment, a modular, electrically powered lawn or patio umbrella in
which lighting systems, such as those utilizing cold cathode tubes, LED's, or florescent
lights; cooling systems, such as those utilizing electric fans or misting systems; and
motorized retraction systems; can be selectively interchanged is provided.
